

# SMARTBRIDGE / SKILL WALLET

Brainstorming & Idea Prioritization

Date: 2 July 2026

Team ID: —

Project Name: Caption AI : AI Powered Social Media Caption Generator

## Step 1: Brainstorm and Idea Listing

Each team member lists out as many ideas as possible without judging them at this stage.

| S.No | Team Member    | Idea / Suggestion                                                                                                                                   | Category      | Group No. |
|------|----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|---------------|-----------|
| 1    | Anushka Saini  | Build a lightweight localized web-app template using Python Flask that serves creative social copy directly onto browser viewports.                 | Web Interface | G-1       |
| 2    | Anushka Saini  | Integrate ultra-fast cloud inferencing APIs (Groq LLM Nodes) to replace heavy local computing dependencies and ensure sub-second response times.    | AI Processing | G-2       |
| 3    | Anushka Saini  | Utilize environment variable config maps (.env files) to strictly lock and separate high-privilege access keys away from core logic loops.          | Data Security | G-3       |
| 4    | Anushka Saini  | Deploy a localized external network relay tool (Ngrok core agent) to securely route internal endpoints past local sandbox firewalls for validation. | Proxy Relay   | G-4       |
| 5    | Khushboo Meena | —                                                                                                                                                   | —             | —         |
| 6    | Riya Sharma    | —                                                                                                                                                   | —             | —         |

## Step 2: Idea Prioritization

Rate each grouped idea on feasibility and importance, then select the final idea(s) to move forward with.

| Group No. | Final Idea                                         | Feasibility | Importance | Priority | Selected (Yes/No) |
|-----------|----------------------------------------------------|-------------|------------|----------|-------------------|
| G-1       | Lightweight Flask Micro-Server Development         | High        | High       | 1        | Yes               |
| G-2       | Groq Cloud LLM API Pipeline Integration            | High        | High       | 1        | Yes               |
| G-3       | Strict Dotenv Token Layer Isolation Architecture   | High        | High       | 1        | Yes               |
| G-4       | Standalone Point-to-Point Edge Agent Network Relay | High        | High       | 1        | Yes               |
