Empathy Map

Date: 2 July 2026	Team ID: —
Project Name: Caption AI : AI Powered Social Media Caption Generator	

Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS "Writing distinct captions for Instagram, LinkedIn, and X every single day takes way too much energy." "I wish I had a tool that instantly understands my brand tone without needing constant re-editing." "Keeping up with trending hashtag strategies manually is exhausting."	THINKS - Is there an easy way to automate this process without sounding robotic? - If I spend less time fighting with copy templates, I could focus on high-level content strategy. - I hope using cloud-hosted AI APIs won't expose my private brand credentials.
Anushka Saini Persona: Social Media Manager / Content Lead	
DOES - Manually drafts, reviews, and updates multiple creative variations into individual local workspace spreadsheets. - Toggles between different platform dashboards to match distinct character limits and structural styles. - Exposes localized test environments over secure point-to-point network channels to check live interface logic.	FEELS - Overwhelmed by continuous high-volume administrative tasks and repetitive operational workflows. - Anxious about maintaining steady content output across highly active channels without delays. - Motivated to discover smart, micro-server based AI solutions that speed up daily development cycles.
