AI Engineering Logbook & Prompt Optimizations

Date: 2 July 2026	Team ID: —
Project Name: Caption AI : AI Powered Social Media Caption Generator	

AI Prompt Logs

Maintaining a structured record of your interactions with Large Language Models ensures reproducibility and tracks your prompt engineering iterations. Document your exact prompts, the system context provided, and the resulting outputs to demonstrate how AI accelerated your development phase.

S.No	Task / Intent	System Prompt & Context	Exact User Prompt	AI Output Summary	Refinements / Iterations
1	Generate API Boilerplate	Act as a senior Python developer. Use Flask micro-framework routing configurations.	"Write a minimalist Flask app.py script that exposes a single POST endpoint called / generate to parse text payloads."	Generated a clean boilerplate template with error wrappers and CORS settings enabled.	Needed to prompt again to add dynamic dot-env configuration loaders.
2	Integrate LLM Client	Act as an expert AI systems engineer. Interface using official Groq client SDK patterns.	"Add a Groq SDK connection handler inside the Flask endpoint to execute completion cycles using llama-3.3-70b-versatile."	Provided token injection structures passing request objects into the chat inference logic blocks.	Added dynamic temperature arguments to configure variable response tones.

S.No	Task / Intent	System Prompt & Context	Exact User Prompt	AI Output Summary	Refinements / Iterations
3	Sanitize Input Prompts	Act as a secure prompt engineer. Protect systems from structural script injection attempts.	"Create a validation utility script to filter special text character vectors before parsing parameters to the model."	Generated a lightweight regex string sanitizer block discarding hidden administrative markup commands.	Refined constraints to let system alphanumeric hashtag formatting structures pass through safely.
4	Proxy Endpoint Setup	Act as a local dev network specialist tools engineer running command interfaces.	"Provide command flags to bypass sandbox configuration access blocks using structural Ngrok tunnel executions."	Returned precise inline configuration flags matching local micro-server port 5000 properties.	Isolated specific token flag strings to bypass early authentication loop warning errors.
5	Build Presentation UI	Act as a minimalist UI/UX designer specializing in modern responsive layouts.	"Write clean semantic HTML5 and vanilla JavaScript code block layouts to display result copy panels dynamically."	Generated card deck viewport components mapped to process clipboard-copy actions instantly.	Adjusted CSS boundary spacing styles to preserve spacious layout view properties cleanly.
